

Los pequeños mundos de Peter Rabbit

System prompt y modo de uso

Grupo 5 · IA Generativa y Diseño · UTDT · Parcial Identidad Generativa

Este es el sistema de prompts con el que generamos las escenas del atlas. Funciona en capas: un párrafo descriptivo que cambia en cada escena, y cinco bloques fijos que se pegan siempre, sin modificar, para que todas las láminas se lean como una sola serie.

1. El system prompt

1 · Párrafo descriptivo de la escena

Es lo único que cambia de una escena a otra. Se completan los cuatro corchetes: lugar, elementos del espacio, acciones y tema.

Create a scene taking place in [DESCRIBIR LUGAR / SITUACIÓN GENERAL]. The scene should include [ELEMENTOS IMPORTANTES DEL ESPACIO: arquitectura, vegetación, muebles, puestos, caminos, objetos, etc.]. Populate it with many small animal characters engaged in different simultaneous activities: [DESCRIBIR ALGUNAS ACCIONES PROPIAS DE ESTA ESCENA]. Include small visual stories, humorous incidents and environmental details related specifically to [TEMA DE LA ESCENA]. Everything should feel busy, lively and full of discoveries.

2 · Composición fija

Cámara, escala y densidad: igual en las nueve láminas.

Compose the image as an extremely dense panoramic seek-and-find storybook illustration, inspired by the visual logic of classic "Where's Wally?" double-page spreads. Use a wide, elevated three-quarter bird's-eye viewpoint, looking slightly downward onto the entire environment. The camera should feel far enough away to reveal a large amount of the setting at once, but close enough that individual characters, clothing, objects and actions remain clearly readable. Maintain exactly the same camera height, viewing angle, visual scale and approximate character size throughout the entire series. Every illustration should feel as though it were observed through the same imaginary camera. Avoid cinematic perspective, close-ups, dramatic foreground characters, portrait compositions or a single dominant focal point. The composition must be densely populated from foreground to background, with dozens of small characters distributed naturally throughout the entire image. Fill almost every area with meaningful visual information while preserving enough separation for individual figures and actions to remain readable. Characters should be relatively small in relation to the overall environment. No single character should dominate the composition. Organize the density into many simultaneous micro-scenes: conversations, accidents, games, work, domestic activities, animals carrying objects, eating, gardening, helping one another, hiding behind things, interacting with architecture, plants and objects. Create multiple visual paths through the image so the viewer's eye constantly discovers new details. There should be no obvious central protagonist and no immediate focal point. The result should feel visually abundant and intricate, but never chaotic or illegible: controlled density, readable silhouettes, overlapping layers, many tiny narratives and discoveries across the entire panorama.

3 · Mundo fijo

Quién vive en este universo y qué nunca aparece.

The entire series belongs to the same miniature pastoral English animal world. It is populated by naturalistic anthropomorphic rabbits, mice, ducks, hedgehogs, squirrels, birds and other small countryside animals. Animals retain believable real-world anatomy, proportions, fur, feathers, paws, muzzles and species-specific characteristics while subtly behaving like humans. Anthropomorphism comes primarily through posture, clothing, gestures and everyday activities rather than cartoon facial expressions. The world feels handcrafted, rural, intimate and slightly old-fashioned. Clothing consists of tiny cotton jackets, dresses, aprons, bonnets, waistcoats, scarves and other simple traditional garments. Environments are filled with abundant botanical details and small handcrafted objects: wildflowers, vegetables, grasses, hedges, trees, wooden furniture, baskets, tools, fences, stone walls, paths, cottage architecture and humble everyday

objects. Everything belongs to the same coherent miniature universe and historical period. No modern objects, contemporary clothing, technology or visual elements should appear.

4 · Estilo de ilustración fijo

Técnica, paleta y qué evitar. Es el prompt de estilo que surgió de describir el moodboard.

Traditional late-19th-century / early-20th-century English children's storybook illustration aesthetic. Delicate hand-drawn pen-and-ink linework combined with transparent watercolor washes on warm ivory paper. Fine, slightly irregular outlines, broken contours, tiny observational strokes and visible handmade imperfections. Naturalistic animal drawing rather than modern cartoon anatomy. Keep the underlying ink drawing clearly visible beneath the watercolor. Use sparse, translucent watercolor, uneven pigment density, subtle watercolor blooms, delicate granulation and occasional imperfect edges. Leave small areas of untouched paper visible throughout the illustration. Use a soft, muted natural palette: sage green, moss green, olive, dusty blue, faded turquoise, warm cream, ochre, raw sienna, earthy beige, dusty rose and restrained brick red. Minimal shadows and very subtle modeling. Forms are described mainly through delicate ink marks, small hatching strokes and transparent watercolor layers rather than digital gradients. Botanical elements should feel carefully observed from nature while remaining loose and handmade. Despite the unusually high density of the scene, preserve the delicacy, transparency and handmade quality of a traditional watercolor storybook illustration. No digital painting appearance, no vector art, no 3D rendering, no photorealism, no anime, no thick outlines, no cel shading, no glossy surfaces, no smooth digital gradients, no hyper-saturated colors, no dramatic cinematic lighting, no oversized cartoon eyes and no contemporary children's-animation aesthetic.

5 · Personaje oculto

Se adjunta la imagen de referencia de Peter junto con el prompt. En la escena 9 (El gran picnic) este bloque se omite: Peter no se esconde.

I am attaching a reference image of Peter Rabbit, the character that must appear inside the scene. Include this exact referenced character once and only once in the illustration. Preserve his recognizable appearance, species, facial characteristics, body proportions, fur coloration and especially his clothing exactly as shown in the attached reference image. Integrate him naturally into one of the many activities occurring within the scene. He must feel like a genuine inhabitant of this world rather than an element pasted on top of the composition. Treat Peter Rabbit as the seek-and-find character of the illustration. Medium hiding difficulty: Peter should NOT be immediately noticeable at first glance, but he should be clearly identifiable after carefully scanning the image. Do not make him impossibly tiny, completely obscured or hidden behind an object. Keep his full or mostly full silhouette visible and recognizable. He may be surrounded by other characters, partially overlapped by environmental elements, or placed within a visually busy area so that he naturally blends into the crowd. Do not place Peter in the center of the composition, isolated in empty space, closest to the viewer, or in an area with strong visual contrast. Do not enlarge him relative to the other characters. His size must be consistent with nearby animals. His recognizability should come from his distinctive appearance and clothing rather than from scale or compositional emphasis. Include several other rabbits and similarly sized animals throughout the scene to create visual camouflage, but do not duplicate Peter's exact distinctive outfit or appearance. The viewer should experience a satisfying moment of recognition – "There he is!" – rather than spotting him instantly or struggling to determine whether he is present at all.

6 · Consistencia de serie

Cierre que repite lo que tiene que mantenerse igual entre láminas.

This illustration belongs to a larger collection of seek-and-find storybook panoramas. Maintain exactly the same visual language across the entire series: same elevated three-quarter viewpoint, same camera distance, same approximate character scale, same high population density, same degree of visual complexity, same watercolor transparency, same fine ink line weight, same muted palette, same paper texture, same degree of naturalism and the same balance between environment and characters. The illustration must be a wide panoramic scene with visual information extending throughout the entire frame, from foreground to background and from left edge to right edge.

2. Modo de uso

1. **Definir la escena nueva.** Completar los cuatro corchetes del párrafo descriptivo: dónde transcurre,

qué elementos tiene el espacio, qué acciones simultáneas hacen los animales y cuál es el tema de la escena.

2. **Armar el prompt completo.** Párrafo descriptivo + los cinco bloques fijos, pegados tal cual, sin modificar, en ese orden.
3. **Generar en ChatGPT (gpt-image).** Adjuntar la imagen de referencia de Peter (imagenes/referencia_peter.png), pegar el prompt y pedir formato panorámico horizontal, aproximadamente 3:2. Las escenas se generan solo a partir del texto; la única imagen que se adjunta es la de Peter.
4. **Revisar el resultado.** Mirar densidad, estilo y coherencia con las otras láminas. Si falta densidad (poca gente, espacios vacíos) o el estilo se corre hacia lo digital, regenerar.
5. **Resolver el escondite a mano.** La IA no sabe esconder: suele repetir a Peter, dejarlo demasiado grande o en primer plano, o rodearlo de conejos casi idénticos. Por eso se elimina el Peter generado y se vuelve a colocar la imagen de referencia en Photoshop (o similar), con tamaño parecido al de los animales vecinos, fuera del centro y lejos del primer plano. Se ajusta caso por caso: cambiar el color de su ropa para integrarlo al entorno, bajar el brillo para que no resalte, o eliminar personajes demasiado parecidos a él.
6. **Escena de cierre.** En El gran picnic Peter no se esconde: aparece a la vista, como anfitrión. Se genera sin el bloque de personaje oculto y no se edita.

Parámetros

Modelo	ChatGPT (gpt-image)
Formato	Panorámico horizontal, aproximadamente 3:2
Seed	No se fijó
Negative prompt	Va dentro del bloque de estilo (lista de “no...”), no como campo aparte
Imagen de referencia	Solo la de Peter, para el personaje oculto

3. La skill

El mismo sistema está empaquetado como skill: identidad-peter/SKILL.md. Reúne el universo, el bloque de estilo, el modelo y los parámetros, la regla de variación, cómo se inserta el elemento oculto (incluida la corrección manual) y las restricciones.

Para usarla: copiar la carpeta identidad-peter dentro de ~/.claude/skills/ (Claude Code), abrir un chat nuevo y pedir una escena en lenguaje natural, sin nombrar la skill. Por ejemplo: “necesito una escena nueva para el atlas de Peter Rabbit, una biblioteca escondida en un tronco hueco”. La skill responde con el prompt completo, listo para pegar en ChatGPT junto con la imagen de Peter.

Probada en un chat limpio, la skill se carga sola, mantiene los bloques fijos palabra por palabra, inventa un lugar nuevo coherente con el universo y sostiene el formato 3:2 sin que se lo pidan.
